

CHARLES TEKPOR

Full-Stack Developer & Network Management Professional | Aspiring Cloud Security Specialist

+233 248 468 450 | tekporcharles77@gmail.com | Mamfe-Akuapem, Ghana | linkedin.com/in/charles-tekpor | github.com/Ewe-Nam

PROFESSIONAL SUMMARY

Full-stack developer and IT support professional who ships production software end-to-end — from database schema and secure backend logic to responsive front-end interfaces and CI/CD deployment. Sole or lead developer on multiple live platforms including a full-stack salon booking PWA and a school management system with 22 tables of Row-Level-Security-protected data. Combines this with hands-on enterprise IT experience (Windows Server, Active Directory, network administration) and a teaching background that sharpens communication and documentation. Building toward a career in cloud security and secure systems architecture.

FEATURED PROJECTS

CBT StyleHub — Full-Stack Salon Booking & Management Platform

2025 – 2026

Project Manager & Technical Lead · 3-person team · **Live: [cbt-stylehub.vercel.app](#)**

Stack: Next.js 16, React 19, TypeScript, Tailwind CSS v4, Prisma 6, Supabase PostgreSQL, Auth.js v5, Arkesel SMS API, Leaflet/OpenStreetMap, Vitest, Vercel CI/CD

- Designed and built a full-stack, four-role platform (customer, professional, owner, admin) shipped as an installable Progressive Web App.
- Implemented authentication and role-based access control (Auth.js v5, JWT sessions, rate-limited sign-in) plus phone-based SMS OTP verification with Zod-validated server actions.
- Developed a real-time booking engine — availability windows, at-home service logic, travel fees, and status-driven messaging.
- Built owner and admin consoles (inventory, appointments, moderation, user/role management) and integrated Leaflet/OpenStreetMap salon discovery.
- Led a 3-person team through a structured 12-week delivery (requirements, WBS, risk & quality planning) using a Git branch → PR → CI/CD workflow with automated Vitest tests.
- Used AI coding tools (Claude Code) to accelerate implementation while owning architecture, security design, and final code review.

Mamfe Apostolic School Complex — Staff Portal

2025 – 2026

Sole Full-Stack Developer · **Live & in daily production use (v1.0)**

Stack: React 18, TypeScript, Vite, React Router 6, Supabase (PostgreSQL, Auth, Row-Level Security, Edge Functions/Deno), Arkesel SMS API, Vercel CI/CD

- Designed and deployed a production school management platform end-to-end — database schema, backend, React front end, and CI/CD — as the sole developer.
- Architected a 22-table PostgreSQL database fully secured with Row-Level Security and a six-tier role-based access model (admin, headteacher, teacher, bursar, auditor, staff).
- Built an automated SMS pipeline (Arkesel gateway) for payment confirmations, fee reminders, and report summaries, keeping all credentials server-side.
- Implemented a curriculum-accurate grading engine (continuous assessment, WAEC-style aggregates, ranked positions) generating report cards, transcripts, and BECE records.
- Diagnosed and resolved a live production outage by tracing Vercel build logs to a broken environment-variable substitution; ran a self-directed security review that closed a privilege-escalation path.
- Leveraged AI-assisted development (Claude Code) throughout the build, directing architecture and security decisions while using AI to speed up implementation and debugging.

Mamfe Apostolic School Complex — Marketing Website

2025 – 2026

Web Developer & Designer (Freelance) · EwenamTech · **Live: [masco-eta.vercel.app](#)**

Stack: HTML5, CSS3, vanilla JavaScript, Python/Pillow, Web3Forms, Git/GitHub, Vercel CI/CD

- Designed and built a responsive 8-page marketing site (Home, About, Academics, Admissions, Campus Life, Gallery, Staff, Contact) with a framework-free, easy-to-host architecture.
- Integrated a serverless contact form (Web3Forms) with validation and spam protection, and automated an image-optimisation pipeline in Python/Pillow.
- Worked to a branch-per-feature Git workflow with pull-request reviews and automatic Vercel deployment.

WORK EXPERIENCE

IT Support Assistant (Contract Staff)

Jan 2025 – Present

Akuapem Community Bank PLC — Mamfe, Eastern Region, Ghana

- Provide technical support to bank staff, diagnosing and resolving hardware, software, and user-related issues; personally repair the majority of the bank's device hardware faults — motherboards, power issues, peripherals, printers — reducing reliance on external vendors.
- Install, configure, and maintain Windows OS and Windows Server environments; administer Active Directory (AD DS).
- Manage IT asset inventory across multiple branches; prepare monthly IT reports on maintenance and infrastructure.

- Support network operations (connectivity troubleshooting, switch installation, LAN testing) and endpoint security.

IT Support Intern

Oct 2024 – Nov 2024

Akuapem Community Bank PLC — Mamfe, Eastern Region, Ghana

- Installed/configured Windows OS, drivers, and business applications; diagnosed and repaired hardware/software issues.
- Assisted with network troubleshooting, antivirus support, and boardroom technology setup.

Teacher — Computing, Mathematics & Science

Jan 2023 – Dec 2024

Mamfe Apostolic School Complex — Ghana

- Delivered Mathematics, Computing, and Science lessons to Basic 7–9 students; developed lesson plans aligned with the GES curriculum.
- Diagnosed, repaired, and maintained school computers; managed the computer lab and CCTV systems.

Hardware Repair Technician (Freelance)

Ongoing

EwenamTech — Smart Solutions, Trusted Repairs

- Diagnose and repair computer and device hardware faults for private clients alongside web development work, building a reputation for reliable, trusted repairs.

SKILLS

AI-Augmented Development: Claude Code, AI-assisted architecture & debugging, prompt engineering for code generation and review

Full-Stack Development: React, Next.js, TypeScript, JavaScript (ES6), Node.js, Tailwind CSS, Vite

Backend & Data: Supabase (PostgreSQL, Auth, Row-Level Security, Edge Functions/Deno), Prisma ORM, Zod validation, MySQL

Authentication & Security: Auth.js (JWT, RBAC), role-based access control, SMS OTP (Arkesel API), secure server actions

DevOps & Tooling: Git & GitHub (branch-per-feature, PR reviews), CI/CD on Vercel, Vitest, Progressive Web Apps

Hardware Repair & Diagnostics: Motherboard-level troubleshooting, component-level repair, printers/peripherals, power issues — repairs majority of in-house device faults

IT Support & Networking: Windows Server, Active Directory (AD DS), LAN/WAN troubleshooting, TCP/IP, hardware diagnostics

Security & Cyber Tools: Kali Linux, Wireshark, Nmap, GNS3, VMware, penetration testing fundamentals, Zabbix

Other Tools: Python (Pillow), Java, Leaflet/OpenStreetMap, Canva, Microsoft Office & Google Workspace

Soft Skills: Project leadership, problem solving, client communication, documentation, teamwork, adaptability

EDUCATION

Higher National Diploma (HND) in Computer Network Management

2024 – Expected 2026

Koforidua Technical University — Koforidua, Eastern Region, Ghana

WASSCE

2015 – 2018

Dorfor Senior High School — Ghana

BECE

2012 – 2015

Juapong Methodist Junior High School — Ghana

CERTIFICATIONS

Cisco Networking Academy — Networking Basics (2026): foundational networking, IP addressing, protocols, troubleshooting.

TECHNICAL INTERESTS

Full-Stack & Cloud Development · Cybersecurity & Ethical Hacking · Network Security · Systems Administration · AI in IT Operations
